Final Project Integrity and AI Usage Statement

DecisionThree | ITC-C508 Deep Learning and NLP Jose Rizal University

Evaluating a RAG Chatbot for JRU CSE Program and Curriculum Inquiries

Authenticity and reported results

By signing below, we confirm that we have reviewed the submitted work and that its reported results reflect the saved experiment and deployment records. We have not fabricated measurements, generated answers, source evidence, or signatures. We retain incomplete attempts and observed answer failures, and we distinguish notebook evaluation from hosted functional checks.

Individual contributions

We confirm that the Member Responsibility Matrix and our individual evidence entries accurately describe our own work. Luke Joaquin Bernardo is assigned notebook implementation, CPU/GPU experiment execution, and deployment. John Cyruz Patron is assigned questions and reference answers, answer evaluation, and the IEEE report. Job Russel Enriquez is assigned source preparation, interface design, and results analysis with Excel. Each of us can explain and defend the technical work we identify as our contribution.

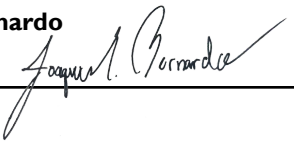

Generative AI disclosure

We used ChatGPT as an assistance tool during project development. Our group directed the work, ran the experiments, tested the deployed chatbot, and remains responsible for reviewing and verifying the submitted code, results, and explanations. Qwen2.5-1.5B-Instruct produced chatbot responses through the RAG pipeline, while Qwen3-8B was used in supplementary experiments.

Accountability

We accept responsibility for the final submission, its disclosures, and our individual contributions. We will correct any discrepancy identified during review and follow the instructor's academic integrity and AI-use requirements. Each member signs only after checking that these declarations and the contribution evidence are accurate.
