Evaluating a RAG Chatbot for JRU CSE Program and Curriculum Inquiries

Agreed primary assignments - November 10, 2026

We assign one primary owner to each technical area below. The individual evidence section records the contributions reported by our group and identifies the corresponding project files. Shared review supports each member's primary responsibility.

Primary owner	Assigned task and scope	Evidence to cite
Luke Joaquin Bernardo	Notebook implementation and troubleshooting Maintain the supplied notebook flow; integrate PDF loading, chunking, embeddings, Chroma retrieval, Qwen generation, and timing/export code. Resolve runtime dependencies.	Final notebook: setup and pipeline cells; relevant code changes and error-resolution records.
Luke Joaquin Bernardo	CPU and GPU experiment execution Run the planned configurations and trials, check device placement, and preserve actual outputs, warm-ups, setup measurements, and interrupted attempts.	Executed notebook outputs; raw trial JSON files; Measurements, TrialLog, and Setup sheets.
Luke Joaquin Bernardo	Hugging Face deployment Maintain the ZeroGPU runtime, fixed settings, application integration, and hosted execution checks. Keep the downloaded response records.	runtime.py, settings.json, requirements.txt; Space revisions and hosted response JSON files.
John Cyruz Patron	Test questions and reference answers Maintain the question set, answerability labels, reference answers, and exact handbook locations. Keep evaluation data outside the retrieval index.	test_questions.json, answer_key.json; reference excerpts and question-set revisions.
John Cyruz Patron	Answer evaluation Review emitted answers against the fixed rubric and retrieved passages. Check correctness, support, completeness, and missing-information handling, including AI-assisted judgments.	Final evaluation CSV, response review JSON, notebook Section 12, and personal review notes.
John Cyruz Patron	IEEE report and reference checking Maintain the group report, verify claims against the saved evidence, and check references. Explain deployment checks separately from notebook experiments.	Final IEEE DOCX and LaTeX source; identifiable edits and fact/reference-check notes.
Job Russel Enriquez	Source preparation Maintain the CSE-only handbook excerpt, page mapping, extraction checks, and source-preparation files. Preserve the distinction between the selected PDF pipeline and the separate prepared-source experiment.	Original and filtered PDFs, page map, prepared-source files, and documented extraction checks.
Job Russel Enriquez	JRU interface design Maintain the logo, blue and gold gradients, rounded panels, readable fields, and responsive styles. Check the question form, source panels, and response download.	app.py interface and CSS; Space revisions and identifiable interface review records.
Job Russel Enriquez	Results analysis and Excel workbook Organize saved measurements and evaluation tables, check formulas and source locations, and explain configuration tradeoffs without changing raw outputs.	Final Excel workbook: Results, Evaluation, Elements, Evidence, Benchmarks, Measurements, TrialLog, Setup, and Methods.

Individual Technical Evidence

The following entries summarize our group-reported contributions and identify the project materials that document each component. The files show the technical work and outputs; member attribution follows our group's contribution record.

Luke Joaquin Bernardo

Contribution: Notebook implementation and troubleshooting, CPU/GPU experiment execution, and Hugging Face deployment. This covers the RAG pipeline, runtime setup, saved trials, and hosted execution checks.

Technical evidence: DecisionThree_Final_Project_Notebook.ipynb, setup and pipeline cells and Sections 10-11; raw experiment JSON records; runtime.py, settings.json, and requirements.txt; hosted response JSON records.

Evidence location: Notebook and experiment package; deployment/ and hosted_records/ in the final IEEE report package. Hosted application: https://huggingface.co/spaces/loid00/decisionthree-jru-cse-chatbot

John Cyruz Patron

Contribution: Questions and reference answers, answer evaluation, and IEEE report preparation and reference checking. This covers the answerable and unanswerable test cases, evaluation criteria, source support, and presentation of the findings.

Technical evidence: test_questions.json and answer_key.json; DecisionThree_Final_Response_Evaluation.csv and DecisionThree_Final_Response_Review.json; notebook Section 12; DecisionThree_Final_IEEE_Report.docx and its LaTeX source.

Evidence location: Question and reference files in the experiment package; final evaluation CSV and review JSON; report Sections III-IV for methods and results, and the references for cited sources.

Job Russel Enriquez

Contribution: CSE source preparation, JRU interface design, and results analysis with the Excel workbook. This covers the handbook excerpt and page mapping, logo and gradient styling, result tables, and configuration comparisons.

Technical evidence: COL-GI-2026-2027_CSE_Only.pdf and the source page map; prepared-source experiment files; app.py interface layout and CSS; DecisionThree_Final_Evaluation.xlsx.

Evidence location: Source and prepared-source files in the experiment package; deployment/app.py in the final IEEE report package; workbook Results, Evaluation, Evidence, Benchmarks, Measurements, TrialLog, Setup, and Methods sheets.

Shared Review and Task Boundaries

We share responsibility for checking consistency across the notebook, workbook, CSV, report, and deployed chatbot. Luke leads pipeline execution and hosting; Job leads source preparation, interface presentation, and workbook analysis; Cyruz leads evaluation and report content. Before signing the integrity statement, each member checks the accuracy of their contribution entry and supporting evidence.

AI Assistance

We used ChatGPT as an assistance tool during project development. Our group directed the work, ran the experiments, tested the deployed chatbot, and remains responsible for reviewing and verifying the submitted code, results, and explanations.
